Professor Mikhail Kutushov presented a new
method - Nonlinear Medicine in Madrid to
Professor Federico Mayor Zaragoza, a
Member of the Royal Spanish Academy of
Medicine,
Ex-Director-General of UNESCO

COVID-19: Etiology, pathogenesis and treatment by a new method of Nonlinear Medicine

Optimal results and successful scientific forecasts are distinguished by the versatility of options for various approaches. In medicine, for example, simply physics, chemistry and biology has long been indispensable. The physician must have competencies in various fields of science and permanently analyze the complex of advanced discoveries. Ideally, the doctor should understand the human energy, take into account psychosomatics, understand the relationship of the patient with society and the environment in which he is. The integration of traditional approaches with the latest knowledge of the 21st century will provide fundamentally different results.

This article proposes to turn to crystallography as one of the main components of the laws of conservation of nature and its connection with human health: it is obvious that crystals and minerals were first on the planet, and only then living matter. The theory of nonlinear medicine, developed by the author of the article more than 30 years ago, combines the interconnections of living and nonliving matter, the causes of diseases and their consequences. I suppose that the conclusions and thoughts described here will seem to many implausible and contrary to established knowledge. Therefore, please familiarize yourself with such a concept as the [Simmelweiss reflex](#).

It is advisable to analyze the relationship between geometry and living matter on the example of the coronavirus COVID -19. The epidemic of coronavirus infection COVID -19 is very important for humanity, it requires him to stop, take a break and look around, expand his ideas about the world and nature. Speculations on the artificiality of this strain, conspiracy theories, conspiracy theories, etc., have nothing to do with reality. Perhaps such an information environment is beneficial for someone, because the consequences are predictable. It will be very bad, and everyone. Seasonal flu will pass, the economic destructive consequences will come and will cause a second and third wave of the same virus attacks, because there is a connection between wars, crises and viruses. Fears suppress a natural healthy existence, provoking diseases of the upper and lower respiratory tract and the body as a whole.

Pathogenicity of COVID-19

It is estimated that over a million people worldwide will die from coronavirus in a year. According to the WHO scale, COVID-19 belongs to the second group of pathogenicity, taking the penultimate place there. The first group includes plague, smallpox, hemorrhagic fevers, the second cholera, typhus, typhoid, viral hepatitis, etc.

Coronaviruses are very variable, there are more than 40 species, their share is 5-14% of all types of influenza.

- There is no need to talk about any artificiality in the origin of COVID-19. The virus and its movement on Earth have exacerbated and exacerbated the problems of mankind. Pneumonia of various etiologies has been growing in recent decades at an alarming rate, moreover, among young people, in large industrial areas and megacities. These statistics once again confirm the idea that "civilization" is the source of diseases, including cancer and viral pandemics. A solution is proposed in the field of prevention and treatment of damage to viruses and their future varieties on the basis of combining the Theory of Nonlinear Medicine with the amazing predictive ability of the theory of comparing similarities with laboratory studies and practical results.

Geolocation COVID-19

Where does the mutant come from?

1. The pandemic began almost simultaneously in two regions, Wuhan (China) and Lombardy (Italy), autumn - winter, 2019-2020. A characteristic feature of these regions is the toxic industrial habitat and densely populated areas. An important factor in these regions is the permanent toxic effect. A person is constantly exposed to harmful substances and 5G electromagnetic radiation, electromagnetic noise, immunity and body weights are weakened. In addition, as we know, China has unusual culinary preferences, almost everything that moves, including bats, is eaten. Scientists from China who studied horseshoe bats coronaviruses have repeatedly warned that these viruses only need one mutation (the virus mutates on average once a week) to jump onto the human population. For many years, animal rights activists have banned the sale and consumption of wild animals. In 2017, virologists warned that there were already viruses in bat populations that were dangerous to humans, and that at any moment an epidemic similar to SARS, the previous coronavirus variant, the focus of which was also in China and was accompanied by a 10% mortality rate, could break out.
2. 2. In a mystical way, the virus instantly spread across the globe. The daily displacement of millions of people is "to blame" for this. The virus, which mutated and passed onto humans, showed that we and nature are one. The social, economic, environmental and psychological consequences have not yet fully manifested themselves. Ecology has won, social and economic disasters are ahead. The psychology of modern man and society as a whole has suffered the most. The percentage of domestic crimes, violence and divorce, all the consequences of self-isolation for a long time will destroy life in all countries of the world, and especially in large cities. Moderate consumption becomes a vital condition, it turned out that you need less money than it seemed. The crisis has shown priority spending items.
3. 3. How not to get infected and how to recover from COVID-19 and, most importantly, from future viruses and pathogenic bacteria that are rapidly changing in the modern environment? The answer can be found in geometry, more precisely crystallography, and not only in SARS-CoV-2 sequencing, reverse transcriptase, ribosomes, S-proteins, furin cleavage.
4. 4. What unites all living and non-living structures? The form. The uniqueness is that it can suggest the behavior of a particular system in the process of life. According to the Theory of Nonlinear Medicine, the shape of the cells of the human body, plants, protozoa, microorganisms, viruses depends on the syngony in which they are located. The human body is "divided" into crystalline syngonies, which include various anatomical and functional units. It is they and the blood system and lymphoid system that are responsible for maintaining homeostasis, especially red blood cells, platelets and macrophages. (Reference: crystallographic classes, or types of symmetry, are combined into larger groups, called systems or syngonies).

Types of syngonias.

32 КЛАССА СИММЕТРИИ КРИСТАЛЛОВ									
Категории									
низшая, $a \neq b \neq c$			средняя, $a = b \neq c$				высшая, $a = b = c$		
Сингония									
ромбическая, $\alpha = \beta = \gamma = 90^\circ$			тетрагональная, $\alpha = \beta = \gamma = 90^\circ$				кубическая, $\alpha = \beta = \gamma = 90^\circ$		
моноклинная, $\alpha = \beta = \gamma \neq 90^\circ$			гексагональная, $\alpha = \beta = 90^\circ, \gamma = 120^\circ$						
триклинная, $\alpha \neq \beta \neq \gamma$									

1. Lower category - no axes of higher order.

2. The middle category is one axis of a higher order.

3. The highest category - several axes of higher order, four axes of the 3rd order, there are no single directions, all directions are symmetrically equal. 32 crystallographic classes are divided into 5 cubic and 27 non-cubic syngonias. Normal cells of the human body are in different syngonias, but mainly in the middle and lower.

Standard cells of multicellular organisms exist in order

and harmony, strictly according to crystalline syngonias, not chaotically. The cancer cells located in any organ are all without exception, and the red blood cells are in higher syngonias, this is a cube and a ball. That is why cancer cells and virions of viruses, the immune system do not notice, and do not "touch" red blood cells. They are "transparent" to lymphocytes and white blood cells. In spherical formations there are several axes of higher order, four axes of the 3rd order, there are no single directions, all directions are symmetrical and equal. Those. there are more reasons for perestroika than in a system with lower syngonias. But energetically higher syngonias are more persistent and more aggressive. **From this it becomes clear why hemoglobin from erythrocytes "disappears" and spherical viruses are more likely to mutate.** In fig. Figure shows the layout of healthy cells of normal multicellular organisms in accordance with crystalline syngonias. The scheme was proposed by the Russian scientist S.V. Savelyev, this scheme correlates with the Theory of Nonlinear Medicine.

Explanation

Anemia develops during the development of cancer. In this case, hemoglobin passes from the face-centric form to the volume-centric form, i.e. access of oxygen to the center of the hemoglobin molecule is difficult. The same applies to CO₂, CO, and glycation of red blood cells. Red blood cells and ferritin are the main goals of coronavirus and cancer, and the lungs are an important but not the main link in the pathogenesis of this disease. It is for this reason that patients with diabetes mellitus more often die from coronavirus.

The analogy between the form of red blood cells, cancer cells and most of the viruses suggests itself. And we know that there are oncogenic viruses that can cause and cause cancer.

It is important to know the **viruses, penetrating the cell, trigger the mechanism of copying and self-reproduction**. Cancer cells copy themselves in the same way. The mechanism is the same and there is a connection between these two phenomena. Therefore, it is a change in the geometric shape that contributes to the malignancy and increased virulence of viruses, despite the fact that the chemical composition of the material remains almost the same, only the external structure of the protein and lipids changes.

This is explained by the fact that in every syngony all reactions change, not only inside, but also outside the cells. Analysis of epidemics and pandemics showed that not only the form of the virus, but also the time, speed of mutations depend on social, environmental activity, solar activity, Schumann waves, the ratio of gases in the atmosphere, etc.

Why do spherical viruses mutate more often than others, causing terrible epidemics?

Mutations of the genetic material of all living things, from viruses to humans, depend on the environment, which is poisoned exactly in the places where epidemics and pandemics begin.

Because in higher syngonies, where there are many axes of symmetry, essentially isotropy reigns, i.e. chaos. Consequently, the isotropic habitat caused by human activities over the past couple of centuries is the cause of outbreaks of "incomprehensible" virus epidemics, the catastrophic growth of cancer pathology, autoimmune diseases, diabetes mellitus and immunodeficiency states, etc. "Mirror" diseases of civilization.

Knowledge of the general laws of the appearance and preservation of living structures made it possible to understand the reason for such a terrible "deformation" of living matter and Nature. Everything happened under the merciless, treacherous and ill-conceived destruction of the atmosphere, hydrosphere and soil, in a very short period of time. All living matter and Nature are closely interconnected, they have "rubbed" together for billions of years. In the oceans, billions of tons of plankton, krill, and algae have controlled the ratios of oxygen and CO₂. Plants produced oxygen at night and absorbed CO₂ at night. But then the nature killer "Homo sapiens" appeared, constant pressure and change began in all directions. Nature has included its fail-safe defense mechanism - viruses. This is a special group of organisms that represent an extracellular form of life. Sizes of viruses range from 20 to 300 nanometers. Thanks to electron microscopy, it was possible to study and see not only the "portrait" of the virus, but also to investigate the processes occurring inside the infected cell. Today, more than 5 thousand viruses are described, and each of them eats and multiplies due to other cells, that is, it parasitizes inside the body. According to scientists, the virus is able to survive in extreme conditions, has intelligence and cunning. By itself, it does not pose any danger, only when it enters the body, it begins to actively multiply. Having selected the necessary cells, he seems to screw his DNA code into them. This happens so quickly that less than a day sometimes passes from the moment of invasion to the first signs of the disease.

Many viruses are considered fatal. In this case, even the most harmless of them can under certain circumstances mutate so much that, once in a weakened body, they will cause serious illness.

Unfortunately, the corpses of modern people, industrialized countries, are "saturated" with xenobiotics to such an extent that they do not decompose in graves for 30 years. Those. viruses deal with modified organisms that have no protection against pathogens and viruses. Many viruses such as herpes, etc. have long been living in people and waiting for immunity to give a systemic failure. Tissues and cells of modern organisms are different! The bodies and tissues of people and pets, exhausted by spoiled water, xenobiotics, artificial food and electromagnetic smog. How long will we last in the world of plastic and money?

To protect yourself from virus attacks, epidemics and pandemics? To start, prioritize. Money is the main killer of nature and humanity. And we must start with them. The second is to stop destroying nature. She will recover quickly. A toxic habitat must be systematically cleaned of toxins and again using natural friendly, non-artificial bacteria. Feeling the weakening of anthropogenic pressure, viruses also "freeze". Cancer will also begin to clear its claws. It is not necessary to fight viruses and nature, but to correct human behavior, thereby saving the immunity of people, protecting the future.

Imagine how the world will change if green industries and inventions open the way! It is difficult to believe in the reality of this idea, because having a huge number of patented developments (an artificial liver-kidney was created for hemodialysis at home; formulas for non-linear medicine drugs for the fight against oncology were developed and studied; "METSIS", a device for early diagnosis of cancer, a magnetic therapy device Meandron

for somatic and oncological diseases, a total of 79 patents), which can save thousands and millions of lives, often have to face the fear of officials and the doctor To do something that can make them get out of their comfort zone and go to the counter to outdated, but convenient ideas! There are thousands of discoveries in the world.

While humanity is making weak attempts to fight off virus attacks with the help of quarantines, vaccinations and various chemicals, this is half measure. We live in a "cloud" of viruses, they are everywhere, their millions of tons fly through the air and move through the water. Each of them hides in their "reservoir", in rats, cats, dogs, bats, humans. In fact, we are crammed with bacteria and viruses. They behave quietly and feed on the "man", without causing attacks of immunity cells. You cannot hide from them, because we are part of nature. Microbes, viruses themselves are waging a continuous war between themselves. Multicellular organisms, this is their battleground for nutrition and territory. They cannot be killed, but they will have to live in peace with them.

Viruses under the microscope

What do small "monsters" look like under a microscope, who rule our world, slowly killing us inside or forming incredible epidemics? Basically they have a spherical shape (higher syngonies)! Let's consider each separately.

Ebola

Ebola is a virus that causes hemorrhagic fever, accompanied by a sharp increase in vascular permeability. The disease develops very quickly. A person dies in a few days from massive bleeding. The outbreak in West Africa in 2014-2016 is the largest and most complex Ebola outbreak since the discovery of this virus in 1976. The average mortality rate of an Ebola virus disease is about 50%. In previous outbreaks, mortality rates ranged from 25% to 30%. Cylindrical form (higher syngonies).

Herpes

Herpes is a type of smallpox, manifested by a rash of vesicles on the skin (this is a harmless cold on the lip). In adults over 60, the herpes virus can cause extensive rashes. In this case, the virus "eats" the myelin sheath of the nerves. The disease occurs with severe pain, it is not fatal, but very painful. The virions of the herpes virus family have a spherical shape with a diameter of 120 to 300 nm (higher syngonies).

HIV

HIV is a slow and progressive disease caused by a virus that infects immune cells. For several years, the disease develops into **AIDS**. The virions of the family have a spherical shape (higher syngonies).

Coronaviruses

Coronaviruses - "corona" in Latin means "crown" and most of them have spikes around them. Spherical shape (higher syngonias).

MERS - (Middle East Respiratory Syndrome Coronavirus). The first cases of the disease were recorded in Saudi Arabia in the early fall of 2012, but WHO recorded cases

of infection until 2019. The clinical picture is characteristic of acute respiratory viral disease: the first symptoms are fever, cough, shortness of breath, as the disease develops, the disease becomes a form of severe viral pneumonia. The disease is characterized by high mortality - about 35%. Spherical shape (higher syngonias).

SARS ("SARS"). The first case was reported in November 2002, in the Chinese province of Guangdong. Within 2 months, the infection spread to neighboring Hong Kong and Vietnam, and at the end of February 2003 and beyond - to other countries and continents. The last case of the disease was recorded in June 2003. A total of 8437 cases of the disease were noted, of which 813 were fatal. Spherical shape (higher syngonias).

COVID-19 is a potentially severe respiratory infection caused by SARS-CoV-2 coronavirus (2019-nCoV). It is a dangerous disease that can occur both in the form of an acute respiratory viral infection of a mild course and in a severe form, specific complications of which may include viral pneumonia, which entails acute respiratory distress syndrome or respiratory failure with a risk of death.

Virus Nipah

Nipah virus - Causes a serious illness characterized by inflammation of the brain (encephalitis) or respiratory diseases. The virus was first detected in 1999 in Malaysia. Spherical shape (higher syngonias).

Spaniard

Spaniard - The Spanish flu epidemic of 1918-1919 was caused by the extremely aggressive and deadly influenza A virus. Healthy adults often fell victim to it, unlike most flu outbreaks that affected mostly weakened categories of people. According to modern estimates, influenza claimed 100 million lives, that is, 5% of the world's population at that time. Oval (higher syngonias)

Zika Virus

Zika virus - The main vectors of the Zika virus causing the disease are mosquitoes of the genus Aedes. Zika virus infection is associated with an increased risk of neurological complications in adults and children, including Guillain-Barré syndrome, neuropathy and myelitis. Spherical shape (higher syngonias)

H1n1

H1N1 ("swine flu"). In April-May 2009, an outbreak of a new strain of influenza virus was observed in Mexico and the United States. On 11 June, WHO announced the swine flu pandemic, the first pandemic in 40 years. About 255716 cases of A / H1N1 influenza infection and 2627 deaths were recorded in more than 140 regions of the world. Spherical shape (higher syngonias).

H5n1

H5N1 ("bird flu"). The first known cases of the disease occurred in Hong Kong in 1997. Then it was first discovered that direct transmission of avian influenza A virus from birds to humans could cause an outbreak of respiratory infection in humans. The virus reappeared in 2003, when new human cases were reported in China and Hong Kong. 15 countries officially notified WHO of 665 cases of infection, 392 of them were fatal. Cylindrical (higher syngony).

Hantavirus

Hantavirus

It is generally accepted that for the first time this virus caused the disease of a large number of people during the Korean War of 1950-1953. Then over 3,000 soldiers felt bad. They had internal bleeding and impaired renal function. This episode is called "Korean hemorrhagic fever." Spherical (higher syngonies).

Unfortunately, looking at the "set" of spherical viruses and their oval counterparts, one can predict outbreaks of more dangerous pandemics that will affect animals and birds, weakened human organisms, their lungs, kidneys, intestines, spinal cord and brain.

March 24, 2020 in China, one resident has already died from hantavirus. And how many die from other unidentified strains? In fact, this case confirms the observation of an increase in the virulence of viruses that are almost harmless to humans, due to a decrease in immunity under the oppression of civilization. **And it is the viruses with this form that are most susceptible to mutations. Only the form of viruses and their identity with cancer suggests how to counter this and future pandemics.**

In figure shows examples of cells of the virus (coronavirus), cancer, and standard red blood cell, on which they can clearly compare their similarity in shape:

Cancer Cell

Coronavirus

Red Blood Cell

Totally, this problem is solved by simple passive and active immunity. Vaccination is not yet possible and illogical, due to the difficulty of finding reliable data, due to the frequent mutation of viruses. The basic immunity, as you know, is created in the intestines, by microbiota! First of all, these are probiotics (symbionts that produce immunocompetent cells in the intestine) and prebiotics (food that helps normal and self-regulating microbiota). As well as antibodies isolated from the tissues of people who have had this or that virus, here is a real and effective help.

Who is opposing whom?

The battlefield is the human body. In the present historical period - this is already thoroughly battered by civilization living matter. Even in ancient Egypt and Greece, people who had been ill with plague were looked after by people who had previously had this disease: experience showed that they were no longer susceptible to infection, it was an empirical experience. New knowledge about the relationship of immunity and crystallography is now proving and clarifying the situation.

The process is as follows: the coronavirus with its RNK, the "rim" of the protein with the horns, attacks the S-protein, almost half dead and immobilized. The only advantage of viruses is nanoscale and number of species. Why they were created by nature is not known, perhaps this is a reliable mechanism for regulating populations on the planet. "Junk" DNA in multicellular cells and "junk biocinosis" play a huge role in the functioning of living matter. And such "microorganisms", essentially parasites, are opposed by cellular and tissue immunity. The whole army with its laws and regulations. Macrophages, immune system generals and soldiers in the form of neutrophils, immunoglobulins, etc. create a cytokine storm. But, the virus also affects red blood cells, transferring its hemoglobin from one form in a cubic syngony to another, which includes a chain of reactions, followed by lung damage.

And from this moment begins the second wave of attack of coronavirus on unprotected lung tissue, the target of viruses.

Immune system patterns

The bulk of immunity is produced in the lymphoid tissue of the small intestine.

80% of the immune system is concentrated in the mucosa and submucosa of the small intestine. It is on her that our attention is directed. It is worth considering the condition of the intestine, its ability to absorb useful substances, and to exclude acute and chronic inflammation of the gastrointestinal tract. In turn, the state of Peyer's plaques depends on the contents of the intestine, and its microbiota.

Viruses, mixing with food and entering the intestines, can suppress lymphoid tissue, which stops producing lymphocytes and immunoglobulins.

The human immune system includes:

- A) The central primary organs are the red bone marrow, and the thymus gland (thymus). These organs produce several types of cells, which oversee the constancy of the cellular and antigenic composition of the internal environment;
- B) Peripheral secondary - spleen, lymph nodes (antibodies enter the inferior vena cava, then into the heart, into the small circle and lungs, thereby strengthening tissue immunity), lymphoid tissue (produces antibodies and immunoglobulins).

Following the logic, we understand that this way the immune system is destroyed, and as a result, tissue immunity, in particular, the lungs, is weakened.

The main cells of the immune system - phagocytes and lymphocytes (B and T lymphocytes) circulate through the circulatory and lymphatic systems, some of which can penetrate the tissues. Lymphocytes produce specific proteins (antibodies) - immunoglobulins that interact with certain antigens and bind them. Antibodies neutralize the activity of poisons, microbes, make them more accessible to phagocytes. Other shaped elements of blood and lymph should remain in sight. Especially from the higher syngonias, primarily red blood cells! They should be in the field of view of researchers constantly! These studies will give us drugs for the treatment of cancer, viral pathologies and diabetes.

Symptom Sequence

Now the question. How to stop the speed of spread and how to cure seriously ill patients? Given the pathogenesis of the disease, paths of salvation can also be traced. Getting coronavirus on the mucous membranes of the mouth, eyes, nose moves further into the brain, bronchi, lungs, esophagus and further into the intestines. The following processes occur, with varying frequency from isolated cases to frequent: loss of smell, cough, pulmonary heart disease, hyperthermia, chills, joint pain, intestines sometimes react and diarrhea joins.

The first barrier: personal hygiene and masks capable of not only passively sorbing viruses, but also actively destroying them. I developed such cartridge masks more than five years ago. Working title: respirator – medical mask. Those. these masks stop and kill viruses not only in the nasopharynx and upper respiratory tract, they can destroy viruses that have penetrated into the depths of the lung tissue. Now the question is about the possibility of using this technology in clinical practice, not only for treating pneumonia with complications of this virus, but also ordinary bacterial pneumonia.

The second barrier: local sanitation of the throat and nose. Daily (2-3 times) rinsing of the nose and oral cavity with saline solution, or soapy water (Alkalization and destruction of the lipid membrane of viruses occur. After the procedure, it is necessary to moisten the mucous membranes).

Third barrier: immunity. There is no innate immunity to this strain. There is an acquired and less protective a priori - BCG. In modern man, all organs are “leaky” for pathogens. The most weak are the blood, intestines and immune system. The conclusion suggests itself. It is necessary to purify the blood, using sufficient **dissymmetric water**, restore the microbiota, for example, with the help of our excellent useful products: Synergists, Symbiontes Kutushov, **Microbiotic mixt.**

Back in 2010, the idea arose to implement a powerful defense of human health. The production of functional foods for adults and children, [“Synergists” and “Symbiontes Kutushov”](#), which:

- restore immunity and balance in the digestive tract;
- neutralize the effect of toxins (food, medicine, alcohol, chemical); - protect against viruses and pathogenic bacteria;
- control the behavior of yeast, toxins, and microbes alien to a healthy human body, the number of which unfortunately has grown significantly and will continue to grow;
- at times reduce the load on the liver, gall bladder, regenerate the mucous membranes of the stomach, esophagus, throat and gums;
- are prevention of oncology.

The composition is based on the combination of the Mongolian fermented milk drink Hurunge, a special symbiosis of bacteria and plant components (broccoli, blueberries, apricot kernel).

The goal was achieved, the forecast turned out to be true, the results of research by Synergists, Symbiontes Kutushov and numerous reviews proved that you can protect yourself and loved ones in a modern environment, live without oncology and epidemics.

To strengthen our natural defense, you must definitely eat foods that friendly bacteria feed on. Pay attention to garlic, it should be consumed daily, 1-2 cloves, finely chop and swallow with water, not chewing. The described recommendations will help start the process of blood purification, restoration of microbiota and immunity. It is necessary to eat foods rich in fiber, vitamins and minerals. Do not forget about plants, for example wormwood, aromas, essential oils, for example, tea tree, needles. To do this, you need to take a small container with water or in an aroma lamp, add a few drops of oil and put it at the head of the bed for the

night. Phytoncides of these plants will protect against viruses that have fallen on the surface of the body, hair, objects during the day and remained on them.

And now, pharmacology, but this is not a barrier, but just an assistant to the self-healing of the body. Recall the title of this article and the results of cancer treatment described in my books, a method for comparing similarities, conclusions, and correlating all of this, it can be argued that nonlinear medicine drugs are a new method in treating people affected by coronavirus.

Nonlinear medicine drugs are [patented](#), have a huge number of studies and confirmed results in [Israel, Russia](#) and other countries, have no side effects, and are not toxic.

RESULTS (I do not recommend watching people with a sensitive nervous system).

Nonlinear medicine drugs cause induced anisotropy and dissymmetry in the cytoplasm of cells, thereby curing many diseases, including viral ones.

In vitro and in vivo, it is proved that organic salts and acids, in a certain combination, not only overwhelmingly affect cancer cells, but also increase the production of interferon by the body's defense systems hundreds of times. Pigments inhibit phytochemical reactions, without which the cancer cell ceases to develop, and, very importantly, activate the mechanism of **apoptosis**, which is responsible for the death of malignant cells, and **autophagy**, leading to partial or complete destruction of cancer cells. Organic pigments block stroma and blood vessels in malignant tumors, thereby significantly limiting their growth.

Thus:

Group of dyes, pigments of oscillators (Nm-2, Nm-3, Nm-5, Nm-6, Nm-7, Nm-8, Nm-9, Nm-10, Nm-11, Nm-12, Nm-13, Nm-14, Nm-15, Nm-16) - is responsible for the suppression of the metabolism and proliferation of almost all types of cancer cells;

The group of dyes, pigments (Nm-18, Nm-19, Nm-20, Nm-21, Nm-21, Nm-22, Nm-23, Nm-24, Nm-25) - is responsible for the suppression of metabolism and proliferation of almost all types of cancer cells;

The group of salts of organic acids (Nm-4, Nm-17) - suppresses the stability of tumors, increases the susceptibility of the tumor to drugs of the first group.

Many note the anti-age effect, which opens up additional prospects for research. The only drawback of the drugs is the lack of official recognition. However, I hope that in connection with the growing need for funds to combat the pandemic and the threat to humanity, it is possible to quickly implement the proposed inventions in healthcare. Nonlinear medicine preparations can be used both for prophylaxis and for the treatment of coronavirus and other types of infection. They have proven themselves very well in the treatment of amyloidosis, autoimmune diseases, diabetes mellitus, etc.

To prevent infection, it is necessary to take two three drops per glass of water (Nm 2, Nm 6, Nm 23) in the morning and evening, and two three drops of this solution in each nostril, in the morning and in the evening. In case of symptoms of a viral disease, you can take a short course of controlled immunosuppressor (AFH) and do inhalation with Nm drugs using a nebulizer (inhaler). In very severe cases, along with conventional methods of therapy, you can enter 1-2 ml of 1% Nm: 2, 6, 7, 15, 23, 25, connecting with a solution of 0.9% NaCl, intravenously (only as directed), two once a day for 5-7 days. The exact recommendations must be selected individually, on the diagnostic device - a mini express test system [METSIS](#).

CONCLUSIONS

To prevent epidemic outbreaks and treat viral infections, you can use biological agents - **sybiontes of bacteria**, the main opponents of viruses, physical factors - [Meandrons of Kutushov](#), dissymmetric water and pharmacological preparations of Nonlinear Medicine. As you can see, a full range of measures has been developed to maintain human health.

The presented methods are an ecological symbiosis of medicine, geometry, laws of crystallography, which are a powerful tool for restoring and maintaining human health. Only good will is needed.
